BODY BUSHINGS
Protect the monoblock body in case of damaged piston

ACCUMULATOR
The accumulator of large dimension with diaphragm supplies both power to the breaker and protects the excavator hydraulic pump and pipeline from damages due to the back shock blows

ISOLATION
An isolation with vulcanized polyurethane between the metal case and the monoblock drastically reduces the noise and the vibrations

HYDRAULIC BRAKE
A hydraulic brake on the piston prohibits the breaker from harmful blank firing

MONOBLOCK
The absence of tie rod increases reliability and makes eventual servicing more simple and economical
